brain powered

When was the last time your kids played a game that didn't have an on/off switch? Don't you miss games that are powered by imagination?

Think-ets is an innovative (and wireless) game that's all about using creative imagination. Think-ets features an assortment of highly detailed miniature trinkets. Together the trinkets can be used to inspire storytelling or test memory, logic and more.

One game suggestion is What's Your Story? A player selects one trinket and begins to tell a story based on what it is. Play continues as each additional person takes a different trinket and adds to that story.

Think-ets retail for \$12.99 and are available at specialty toy and gift stores or at www.Think-a-lot.com.
